MultiPASS C70

overview

Concept

The MultiPASS C70 is a highly featured, full colour, all-in-one PC connectable multifunctional product. The small, compact MultiPASS C70 offers fast mono and colour faxing, high quality Bubble Jet printing with PhotoRealism™ and colour copying. PC faxing and colour scanning are also available via a new, improved version of Desktop Manager Software compatible with Windows 95, 98 and NT4.0.

The flexibility and capability of the MultiPASS C70 make it an extremely desirable colour 5 in 1 unit. The beauty of the MultiPASS C70 is that it still functions as a fully featured standalone colour or mono fax and copier, even when the PC is switched off, unlike many of its competitors. The MultiPASS C70 is the colour, space saving desktop solution for home and business users alike.

Positioning

'Full Colour All-in-One Desktop Solution'

The MultiPASS C70 is a compact 5 in 1 colour, PC connectable, desktop solution. The concept is targeted towards the IT literate small office, home office or leisure user who requires colour fax, print, copy, scan and also PC faxing capability from one space saving unit.

The MultiPASS C70 is unique in the fact that it operates perfectly as a standalone colour and mono fax when the PC is switched off, and as a fully functional 5 in 1 solution when running Desktop Manager Software through a PC.

Target Market

The capability of the MultiPASS C70, with a Group 3 modem and upto 42 page document memory, is focused towards the small office, home office environment where multifunctionality and flexibility is required. The full colour aspect of this product makes it the ideal choice for those who demand colour capability. Whether it be scanning in and editing a colour document, printing colour documents generated or received onto the desktop, colour faxing or purely colour copying, the MultiPASS C70 is the ultimate solution. The colour functionality would benefit those businesses or home users where seeing colour is of paramount importance; for instance Internet shopping, furnishings, photography, designers and estate agents.

Canon

MultiPASS C70

features, advantages and benefits

Features	Advantages	Benefits
Group 3 Modem (14.4Kbps)	Fast fax transmission* - B&W A4 page - 6 seconds Colour A4 page - 120 seconds	Saves money on call costs. Colour fax data is compressed to allow faster transmission
42 page memory* (672KB)	Allows up to 42 pages to be stored into memory	If paper or cartridge runs out, documents are automatically stored into memory. Once consumables are replaced the fax will print out memory contents
Desktop Manager Software	Monitor the functions of the MultiPASS with the on screen status monitor. Built in address book for easy data storage	'Drag and Drop' facility saves time and effort, whilst status monitor shows exactly what the MultiPASS is doing by hovering over the icon. Users do not need to keep DTM software 'on screen' all the time
Mono and Colour printing*	High quality Bubble Jet printing with PhotoRealism™ B&W A4 page - 5ppm Colour A4 page - 2ppm	All printed documents are of high quality with professional look in colour or black and white
Colour Scanning	Enables colour scanning to desktop or any MAPI[1] compliant e-mail package. Scan documents at upto 600dpi	Documents can be scanned in, edited and then printed out. Allows user to archive documents received and to create documents using photos
Mono and colour copying	Copying available from the desktop	Eliminates copy shop costs or the need for a separate copier
PC Faxing	Enables users to send and receive faxes directly on to the desktop	Faxes can be received and sent via the desktop, which reduces cartridge usage and paper wastage - hence cost. Can also be programmed to send at a later time, when call costs maybe cheaper
12 one touch, 100 coded dials	Program frequently used numbers	Saves time and eliminates keying errors on frequently used fax numbers. Programmable either standalone or through DTM software
Standalone Fax	Fully programmable and operational as a standalone fax machine	Can physically receive faxed documents at any time, even when PC is switched off

*Based on Canon Fax Standard Chart No.1, A4, Standard Mode (for fax excluding call set up & completion protocol)

MultiPASS C70

feature comparison

	MultiPASS Full Colour All-in-One Desktop Solution	Hewlett Packard HP710/T45
Modem speed	MultiPASS C70 has 14.4Kbps modem speed	Both T45 and HP710 have modem speeds of 14.4Kbps
Colour Faxing	The MultiPASS C70 is fully programmable and operational as a standalone model. It can send and receive colour and mono faxes, even when the PC is switched off	The HP710 requires data compression via the PC connection to send a colour fax. It cannot colour fax as a standalone model
Memory Transmission	The MultiPASS C70 has a memory transmission feature. This means that if the line is busy the fax will be stored into memory and transmitted when the line is free. This ensures the scanning path is then free for other transactions	T45 does not have memory transmission. This essentially means that if the user wishes to use the scanning path the document must be removed and then re-set
More one-touch convenience	The MultiPASS C70 has 12 one-touch dials and 100 coded speed-dials	The HP machines have no one touch dials and a maximum of 75 coded speed dials on the T45 model
Automatic Document Feeder	30 sheets of A4 paper can be stored in the MultiPASS C70 ADF	Both the HP models only offer a 20 sheet ADF
Size and Design	The MultiPASS C70 is approximately 30% smaller than the T45 with a more sophisticated design	T45 is a large machine, which is difficult to fit onto the desktop
Handset option	A handset can be fitted to the MultiPASS C70 for use as an additional telephone and added functionality	The handset is not available for the T45

desktop manager software

The MultiPASS C70 and C80 come complete with Desktop Manager Software on CD Rom. It is simple and easy to install and is similar in design and layout to any Windows package. Plus, it is compatible with Windows operating systems 95, 98 and NT4.0.

It enables users to perform many functions, straight from the desktop. Colour scanning to the desktop is available through Scangear software, all built into the MultiPASS software. The scanning to desktop function allows users to scan at up to 600dpi straight to e-mail, scan a document/photo and edit using any standard image application, or simply scan an image and save to disk or fax on. All documents received onto the desktop are viewed as thumbnail images, so the user can always see what is there. What's more, these images can be amalgamated to form a multi-page document generated, if desired, in different packages.

Canon

MultiPASS C70
MultiPASS C80

Sending a fax from the desktop has never been so easy. The software allows faxes to be sent directly from standard software packages and eliminates the need to print. Likewise, to save on paper and consumables costs, faxes can be received directly onto the desktop.

Toolbars within the software give easy and instant access to all the Desktop Manager functions and there is also a time saving launcher bar that can be customised by the user to include frequently used packages. The launcher bar allows users to 'drag and drop' documents from the MultiPASS Desktop viewer straight into popular packages. MultiPASS software will then open the package and the document can be viewed or edited.

Frequently used fax numbers or e-mail addresses can also be stored within the software. The built in address book allows users to store details for quick, easy and accurate retrieval at the click of a mouse.

The new MultiPASS Desktop Manager Software is simple and easy to use and all hardware settings can be controlled via the screen. All in all, the new version of MultiPASS Desktop Manager is completely comprehensive - a must for the multifunctional user.

Fax B210C Fax B230C
MultiPASS C70 MultiPASS C80

press release

COLOUR FAX SIGNALS BRIGHT CANON PROMISE

Colour fax is the latest addition to the Canon range and with four new models on offer the choice is now even stronger for the home and business user. Canon's plain paper colour machines - the B210C, B230C, MultiPASS C70 and MultiPASS C80 - offer full colour communication with fax, print and copying functions.

The MultiPASS range of colour faxes offer a full multifunctional capability with the inclusion of desktop PC faxing and colour scanning through a new version of Desktop Manager Software. This simple to use addition to the MultiPASS models has full drag and drop facilities to make PC faxing a simple task. Both the MultiPASS C70 and C80 models are targeted towards the IT literate home user but can be used with great productivity in a smaller office environment.

Both these new models replace the previous MultiPASS C20 and C50 fax machines that established the company's reputation in the multifunctional fax market. With a strong pedigree in printing and faxing, the C70 and C80 cement Canon's position as a market leader in office and business communications. The C70 is a fast Group 3 machine while the C80 is a Super Group 3 model with a b&w transmission time half of the C70 at just 3 seconds and colour at less than 36 seconds per page.

High quality Bubble Jet colour printing with PhotoRealism™ means two pages per minute output. Operating as a standalone fax, both models have 12 one touch, 100 coded and 111 group dials for speed and convenience. The C70 has a 672KB memory while the C80 has 616MB enabling up to 426 page document storage.

The full capabilities of these new fax machines are powerfully enhanced with the latest Desktop Manager Software. Looking like an easy to read Windows package, this built in software is the ultimate all-in-one colour desktop solution. Using thumbnail icons it has an editable toolbar and launcher icon for easy additions of new applications. Although both machines are fully functionable as standalone faxes, they can be easily operated with the Desktop Manager Software for everyday use.

Fax B210C Fax B230C

MultiPASS C70 MultiPASS C80

COLOUR FAX SIGNALS BRIGHT CANON PROMISE

The breadth of Canon's new colour fax range is even greater with the introduction of the new entry level models - the Fax B210C and B230C - fully featured and with the option of a colour printer connection for each. The intended market for these models is the non IT literate home office user who needs a full colour fax and the option of using the B210C or B230C as an optional colour printer combined in a compact unit that can sit on any desktop. As with the MultiPASS fax models, the B210C and B230C are Group 3 faxes (the B230C a Super Group 3 variation) with the same fast transmission times. Both models have delayed transmission and sequential broadcasting upto 113 destinations with the B210C having a mono memory size of 42 pages.

The inclusion of a handset with both models further adds to the desirability and usefulness of the B210C and B230C. Also equipped with Canon's own PhotoRealism™ for high quality printing standards, the B210C and B230C can output colour pages at 2 per minute or a handy 5 per minute in mono. So not only can they be seen as fax machines, but using the optional colour printer connections, as more than handy additions to any home, small or even medium sized office.

Ian Legg, Canon's Fax Product Manager, sees the introduction of four new colour fax models as a statement of Canon's intent in the fax market.

“With the Canon name and pedigree in both fax and printers, the new MultiPASS all-in-one B210C and B230C will set even higher standards for affordable and productive multi-function devices. At this level the need is for affordable faxes that can do more than just send and receive - and that's the job of these new models. They are fast, compact, economical and reliable.”
